

# Downloading an Import Template

Last Modified on 06/30/2022 1:15 pm EDT

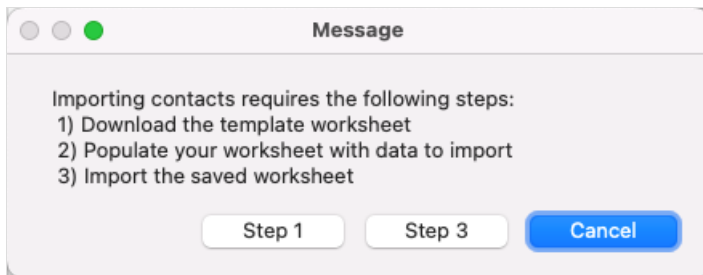

This guide explains how to easily obtain a spreadsheet you can use for importing data into aACE. It is intended for general users.

aACE provides import templates structured for [each module that accepts data imports](https://aace6.knowledgeowl.com/help/data-you-can-import-into-aace) (<https://aace6.knowledgeowl.com/help/data-you-can-import-into-aace>). Use these templates to help [prepare your data](https://aace6.knowledgeowl.com/help/preparing-a-data-file-for-importing) (<https://aace6.knowledgeowl.com/help/preparing-a-data-file-for-importing>) for import.

Downloading an import template is standard across the aACE modules. This guide uses the Contacts module as an example.

1. Navigate from **Main Menu > CRM & Sales > Contacts**.
2. At the list view, use the [Quick Search](https://aace6.knowledgeowl.com/help/using-the-quick-search-bar) (<https://aace6.knowledgeowl.com/help/using-the-quick-search-bar>) bar to locate the desired records.
3. Click **Actions > Import Contacts**.
4. At the dialogue, click **Step 1**.

aACE downloads the import spreadsheet to your workstation desktop.

## Populating the Import Template

When you work with the data in your template, make sure to save the file format as an *Excel or FileMaker spreadsheet*. This helps ensure the data mapping will work correctly when you [import the records](https://aace6.knowledgeowl.com/help/importing-records) (<https://aace6.knowledgeowl.com/help/importing-records>).

You can populate an import spreadsheet in two ways:

- Copy your data – Paste the info into the aACE template columns. Use this method when your data is still in another software system or when the spreadsheet of your data has columns sequenced different from the template.
- Copy the template column names – Paste the column titles from the aACE template into your source file. Use this method when your source file already includes the data

columns, but not the correct column names.

## Data in Other File Formats

Your data may initially be available only in other file formats:

- XML-structured files – Convert these to an Excel or FileMaker spreadsheet.
  - Tab-delimited files – You can import data in this format, but it will require a longer process of [mapping the data to the import fields by hand](https://aace6.knowledgeowl.com/help/mapping-import-fields-by-hand) (<https://aace6.knowledgeowl.com/help/mapping-import-fields-by-hand>).
-
