Linking Task Groups to Assembly Line Item Codes

Last Modified on 03/20/2023 2:35 pm EDT

> This guide explains how to assign task groups to assembly line item codes. It is intended for general users.
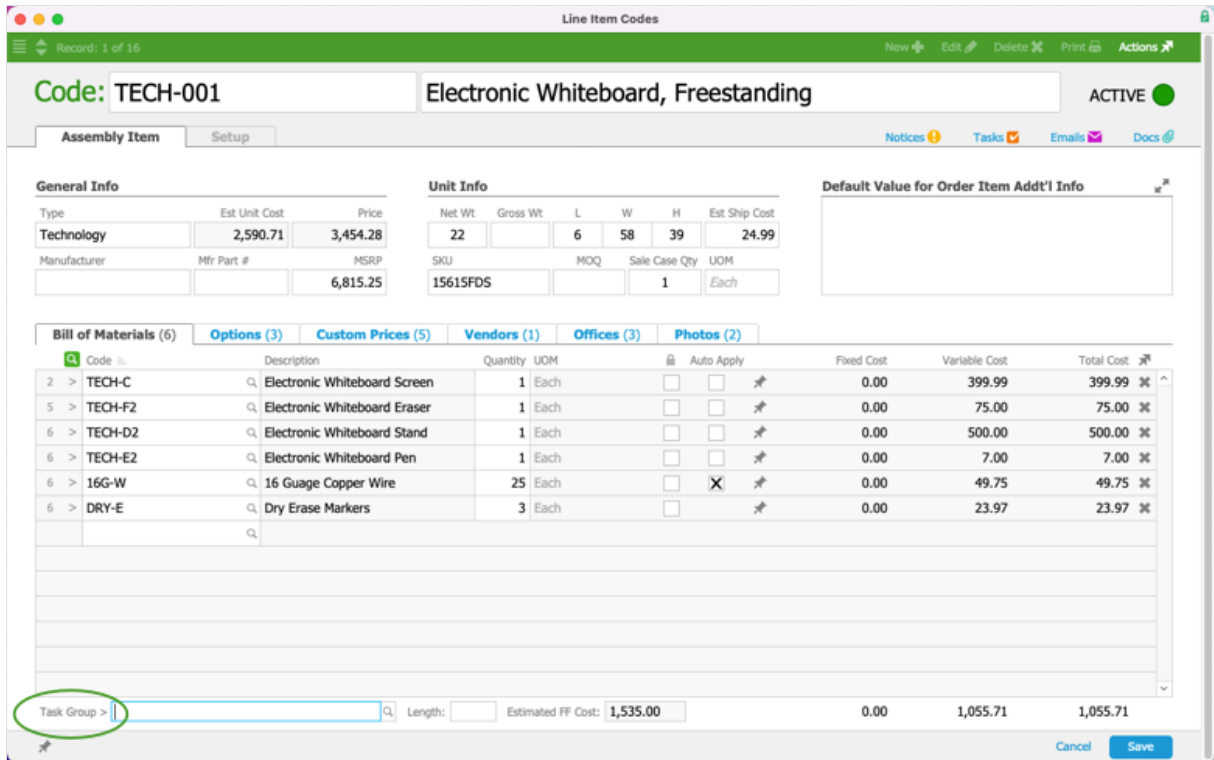

When you link an [active task group](https://aace6.knowledgeowl.com/help/creating-task-groups) to an assembly [line item code](https://aace6.knowledgeowl.com/help/overview-of-line-item-codes) (LIC), and that item is subsequently included on an order, the system will generate and schedule the tasks needed to complete the order.

You can link task groups using two methods:

Link a Task Group to an Assembly Line Item Code

After you set up an assembly LIC, you can link it to an existing task group:

1. Navigate from **Main Menu** > **Order Setup** > **Line Item Codes**.
2. Use the [Quick Search](https://aace6.knowledgeowl.com/help/using-the-quick-search-bar) bar to locate the desired LIC.
3. At the detail view, click **Edit**.
4. At the bottom of the Bill of Materials tab, click the **Task Group** field and select the desired task group.

5. Click **Save**.
   The record updates with the estimated length of time and fulfillment cost from the task group.

Link a Task Group to Multiple LICs

When several assembly LICs have the same standardized fulfillment process, system administrators can link a task group to all of them at once:

1. Navigate from **Main Menu** > **Order Setup** > **Line Item Codes**.
2. Use the Quick Search (https://aace6.knowledgeowl.com/help/using-the-quick-search-bar) bar to display the set of records that need to be linked to the task group.
   Note: If any LICs in the list are *not* Assembly or Assembled Inventory Type, aACE will skip them and *not* link them to the task group.
3. At the list view, click **Admin Actions** (⚙) > **Update Task Group for Line Item Codes in List**.

4. At the confirmation dialog, click **Select**.
5. At the Task Groups Selector, click on the desired task group.

6. Click **Save**.
7. At the confirmation dialog, click **OK**.
